

PICTORICO®

Water-Resistance:

Water-Resistance

Pictorico's unique molecular structure creates a printing surface that is highly resistant to water. Above, we've immersed a sheet of Pictorico's Premium Photo Glossy Paper and a sheet of the competitor's inkjet paper in water for 30 seconds.

While the competitor's paper sustained extensive water damage, the image printed on Pictorico paper remained as clean and as sharp as the original.
